

Annex 1

Appendix 1 DISSERTATION WRITING CHARTER (Final year internship/Master)

1. Dissertation form

1.1. Dissertation format

The dissertation must be written in A4 format (21 x 29.7 cm).

1.2. Pagination

- All pages count in the pagination sequence.
- The pages preceding the introduction are numbered in Roman numerals; however, the cover and title page are not numbered.
- Numbers appear on all other pages. Subsequently, all pages are numbered in Arabic numerals, from the first page of the introduction to the end, including the appendix pages.
- Pages must be numbered in the lower right corner; the numbers are placed 2.5 cm from the bottom of the page and aligned with the right side of the text. There is no dash or period before or after the page number. Numbered pages must follow these standards in increasing sequential order.

1.3. Margins

Page margins must be 2.5 cm on the left, top, and the other two sides of the sheets.

1.4. Writing quality: "always favor simplicity and clarity"

- The following is specifically recommended when writing the dissertation:
- Prefer short, clear, and precise sentences;
- Check that all sentences have a verb;
- Scientific texts never allow sentences without a verb (as found in journalistic style);
- Do not create a paragraph containing just one sentence;
- Reread (or better, have the text reread) to correct typos and spelling errors, which are underestimated by the writer but considerably alter the quality of the document. Using the spelling and grammar checker of a recent word processor is essential but not sufficient;
- For the sake of uniformity, it is recommended to keep the same font and size (body). Indeed, the chosen fonts facilitate or hinder reading depending on the case. It is preferable to use a simple font, size 12 pt for a Times New Roman font, for example. Titles can be one point size larger than the body text. The font of footnotes must be smaller than that of the main text;
- Subtitles are linked to chapters. For example, in Chapter 1, the first subtitle will be numbered 1.1. It is possible to add another level as needed, for example 1.1.1;
- Paragraphs must be justified;
- It is recommended: single spacing or 1.5 spacing for paragraphs with 6 pt spacing after each paragraph; 12 pt spacing before and after a title or subtitle.
- A chapter always starts on a new page. Generally, only the development chapters are numbered. However, depending on disciplinary needs, the introduction can become the first chapter and the conclusion the last. In all cases, the introduction and the conclusion must retain their own functions and must not serve for the development of the subject. In the structure of a chapter, it is recommended to stick to at most three subdivisions to avoid overloading the numbering.

1.5. Volume of the dissertation

- The final year internship dissertation must not exceed 80 to 110 pages;
- The Master's dissertation must not exceed 40 to 50 pages;
- If appendices are planned, they must be gathered in a single document which must not exceed 15 pages for the internship dissertation and 10 pages for the Master's dissertation.

2. Content of the dissertation

The dissertation must be organized in the following manner:

2.1. Cover page

- At the time of submission to Drive (digital version), the cover page is white and must conform to the model in Appendix 1.
- For the final version to be submitted to the library: the cover is white and must mention the date of the defense and the members of the jury. Furthermore, the model required by the library must be respected.

2.2. Dedications (optional)

Dedications are a tribute that the student wishes to pay to one or more people of their choice.

2.3. Acknowledgments (optional)

Through the acknowledgments, the student draws the reader's attention to the help that certain people provided, their advice, or any other form of contribution during the completion of their final year internship. It is in this section that the student must express gratitude to their supervisor(s)/promoter(s) and to the host organization in which they completed their internship.

2.4. Abstract

The abstract must give an exact idea of the content of the dissertation, it must give the reader and/or evaluator a good understanding of the project completed and it must not contain references or figures. It is a brief presentation (half a page) of the subject treated, the objectives pursued, any hypotheses made, the methods used, the proposals developed, and the results obtained. Keywords (maximum 5) should also be provided at this level.

2.5. Table of contents

The table of contents (automatically generated under MS-Word or other software) includes, in their order of appearance in the dissertation, the mention of all first, second, and third-order divisions, i.e., the mention of chapter, section, and subsection titles.

The mentions of chapter, section, and subsection titles in the table of contents must be identical in all respects to the titles of these parts in the dissertation; they must be presented in the same order and without interruption in their logical sequence.

In the text, do not underline paragraph titles and subtitles. Use formatting and numbering managed automatically by the word processing software.

Paragraphs must be well-separated. Use an indent at the beginning of the paragraph.

2.6. List of figures

It includes the figure numbers as well as their full title.

Anything involving a drawing (experimental setup diagram, graph, etc.) is called a figure (and not a graph). Figures are numbered in Arabic numerals and designated in *Italics*. Example: Figure 1, Figure 2, etc.

2.7. List of tables

It includes the table numbers as well as their full title.

Anything that includes only numbers or writing is called a table. Tables are numbered in Roman numerals. Example: Table I, Table II, etc.

2.8. Size, title of tables and figures

- Tables and figures must be of sufficient size to be easily legible. They must therefore occupy half or at least one-third of the page in which they are inserted. They and their titles must be centered.
- Each table and figure must be given a sufficiently explicit title so that the reader understands what it represents without needing to refer to the text.
- The legend of all abbreviations used in tables and figures must be explained, even if these abbreviations have already been defined in the body of the text.
- Tables and figures must be referenced in the text. Example: The results show... (see Figure 2).

2.9. List of acronyms and abbreviations

It presents, in alphabetical order, the acronyms and abbreviations used in the dissertation as well as their meaning.

2.10. Introduction

In the introduction, the study context, the problem posed, and the goals pursued are presented, as well as the general structure (or organization) of the dissertation. It provides the necessary details to allow any reader to understand the work performed and know its scope.

2.11. Body of the dissertation

The body is the main part of the dissertation. It notably presents the existing state (if applicable), the expression of needs, the theoretical development, the methodology and design of experimentation, measurements, results, and their analysis (if applicable).

2.12. Conclusion

The conclusion allows for emphasizing the contributions of the work performed by summarizing the main ones while identifying its limits and constraints. It also allows for identifying new perspectives and paths for improvement.

2.13. Bibliographical references

They list all documents consulted during the work (books, theses, journals, technical files, electronic documents from the web, etc.) and to which reference must be made in the text.

Any reference appearing in the bibliography must be the subject of a cross-reference in the text and any article mentioned in the text must appear in the bibliographical references. If the original of the article or book one wishes to cite in support of the argument has not been read, but this reference was proposed by another author, one must indicate in parentheses: the name of the author, the date, then cited by X, date.

The list of references will be given in alphabetical order of authors, referring to the APA standard (see Google Scholar).

Examples :

Fernandez, A. (2000). Les nouveaux tableaux de bord des décideurs. *Les éditions de l'organisation*.

Vanini, U., & Bochert, S. (2014). An Empirical Investigation of Maturity Levels, in Knowledge Management. *Electronic Journal of Knowledge Management*, 12 (4), 219-229.

For web references, the link from which the document can be downloaded as well as the date of consultation must be given (because web data is volatile).

Example :

CEFRIIO, Conseils Atelya (2011). *Les usages du Web 2.0 dans les organisations*. [Publication officielle]. <http://bel.uqtr.ca/id/eprint/1858/>

2.14. Annex documents (optional)

Although necessary for understanding the work performed, certain documents can weigh down the text. It is therefore preferable to present them in an annex document and to separate them from each other by appropriate title pages. They must be given the same importance in terms of presentation as the base document.
